# Executive summary

The **Schengen Information System (SIS)** is a large-scale IT system that supports internal security in Europe, allowing the **exchange and consultation of information on people of interest (e.g., wanted or missing person) and objects (e.g., a stolen car)** between national law enforcement, border control, customs, visa and judicial authorities.

SIS supports authorities to ensure Europe’s internal security, while respecting data protection requirements. It is used by security officials to help keep people safe and counter cross-border crime.

In 2023:

**91 million** alerts stored

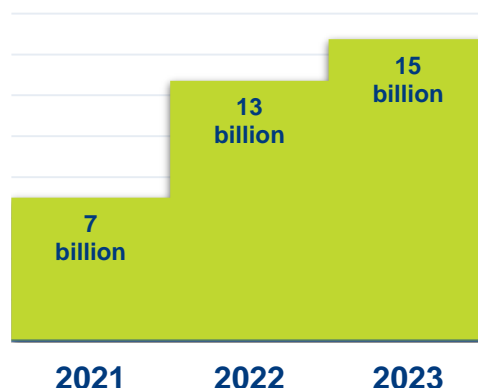

**15 billion** searches performed

**357 thousand** reported hits

**ALERTS**

**SEARCHES**

**HITS**

## Introduction

This report contains statistical information on the use of the Schengen Information System (SIS) for the year 2023.

On 7 March 2023, the new reinforced SIS entered into operation taking over from SIS II. The data compiled for 2023 comes from two different systems:

- From 01 January until 6 March, data comes from SIS II. Data was collected from Member States, the relevant EU Agencies and the Central SIS using the same templates as in the past exercises, in accordance with Article 50(3) of Regulation (EC) No 1987/2006 and Article 66(3) of Council Decision 2007/533/JHA;
- From 7 March until 31 December, data comes from the new reinforced SIS. Data was collected from Member States, the relevant EU Agencies and the Central SIS based on the new templates, in accordance with Article 16 Regulation (EU) 2018/1860, Article 60(3) Regulation (EU) 2018/1861 and Article 74(3) Regulation (EU) 2018/1862.

There are several changes between the two systems, including extended access rights, additional categories of alerts stored, categories of data with changed or expanded scope, and also extended reporting obligations. All of the above made the collection of data for 2023 more complex in comparison to the past. Based on the changes introduced by the new SIS legal framework, any comparison with the past years' data sets should not be considered straightforward.

# 1 ACCESS TO SIS

# 1. Access to SIS

In 2023, there were a total of **14,762,710,821 accesses to SIS** performed by the Member States and the EU Agencies connected to the system. Two types of accesses are possible in the SIS:

- Searches: alphanumeric and biometric;
- Operations performed in order to create, update and manage alerts (CUD).

The table in Figure 1 shows the total number of accesses, with a breakdown of the searches (alphanumeric and biometric), and operations performed for managing alerts (CUD).

**Figure 1 — Total number of accesses in 2023**

TOTAL Alphanumeric searches	14,737,521,364
TOTAL Biometric searches	4,203,524
<b>Total Searches in SIS in 2023</b>	<b>14,741,724,888</b>
TOTAL CUD in 2023	20,985,933
<b>Total Access to SIS in 2023</b>	<b>14,762,710,821</b>

The table in Figure 2 shows the total alphanumeric searches reported and operations performed for managing alerts (CUD), with a breakdown by Member States and EU Agencies.

Cyprus started using SIS in July 2023. In a bit more than 5 months, Cyprus performed 0.14% of the total accesses to SIS performed by all Member States.

The EU Agencies currently connected to the SIS are Europol and Eurojust, the latter did not report any searches in the system in 2023. Frontex is not yet using the SIS. There is an on-going project with the objective of connecting Frontex to the SIS.

## 1.1. Searches in SIS

In 2023, there were a total of **14,741,724,888 searches performed against the SIS**. The table in Figure 3 shows the 2023 alphanumeric searches with breakdown per Member States and EU Agencies.

Two types of searches are possible in SIS:

- **Alphanumeric searches** made against the central SIS or a national copy of the SIS, regardless of whether or not there was a match. Member States without a national copy, and therefore searching only in the Central SIS are Denmark, Finland, Liechtenstein, Norway, and Slovenia. In 2023, in addition to those countries and to Europol, there were also 17 Member States which partially used the Central SIS for alphanumeric searches. Those countries were Austria, Belgium, Croatia, Czechia, Cyprus, Greece, Hungary, Iceland, Latvia, Luxembourg, the Netherlands, Poland, Portugal, Romania, Slovakia, Sweden, and Switzerland. This data is reported by Member States and EU Agencies on a yearly basis.

**Over 14.7 billion alphanumeric searches were reported in 2023.**

- **Biometric searches** are performed against the Central SIS with the aim of identifying a person of interest solely based on fingerprints. All Member States were required to enable SIS-AFIS (Automated Fingerprint Identification System) searches at national level by the end of December 2020. In 2023, 28 Member States regularly used this functionality. This data is available in the Central SIS, hence not reported by Member States and/or EU Agencies.

**Over 4 million biometric searches were registered in 2023.**

Alphanumeric searches can be performed<sup>1</sup> in two ways:

- **Manually processed searches** are defined as searches involving human intervention, e.g., searches by staff using radios, telephones, computer terminals and, document scanners or other forms of traditional checks where a human user makes the decision to carry out a check.
- **Automatically processed searches** take place without human intervention. Commonly, these will be searches carried out by automatic number plate recognition systems (ANPR) or other forms of automated bulk searches such as the processing of passenger name records. If a Member State or EU Agency does not possess such technology or does not access the SIS in this way, this field is left blank.

Not all Member States provided a breakdown between manually and automatically processed searches. Estonia, Germany, Portugal, Romania and Switzerland reported not being able to separate automatic and manual searches.

As from 7 March 2023, the alphanumeric searches reported by Member States include also all searches done by or on behalf of the services responsible for issuing registration certificates for vehicles, for boats, for aircrafts, and for firearms.

In absolute terms, the Member States that searched the SIS the most in 2023 were the Netherlands (with 27% of the total searches by the Member States), similar to the trend of the last couple of years, followed by Belgium (24%), France (9%) and Spain (8%).

---

<sup>1</sup> Some Member States did not provide a breakdown of the way alphanumeric searches are performed. This implies that the total number of manual searches and total of automated searches for all Member States are only partial (and their sum does not equate to the total number of searches reported).

**Figure 3 — SIS alphanumeric searches**

The systematic use of automatically processed searches - as for example by ANPR systems or similar - by an increasing number of Member States is clearly visible. In 2023, automated searches amounted to almost 70% of the total searches reported. Automatic searches totalled 4 billion in 2021, increasing to 8.3 billion in 2022, and reaching 10.1 billion in 2023.

It is complex to compare Member States when it comes to the use of the SIS. The use depends on many factors, including the definition at national level of business processes and workflows. Furthermore, each Member State has its own crime rate and different geographical location determining the number of border crossing points and the length of the external land borders, thus impacting the use of the system. The map in Figure 4 is an attempt to show SIS total searches per Member State per 1 million inhabitants<sup>2</sup>.

<sup>2</sup> Population figures are taken from 2023 public Eurostat data. <https://europa.eu/!PyBrjW>

# Searches per million inhabitants

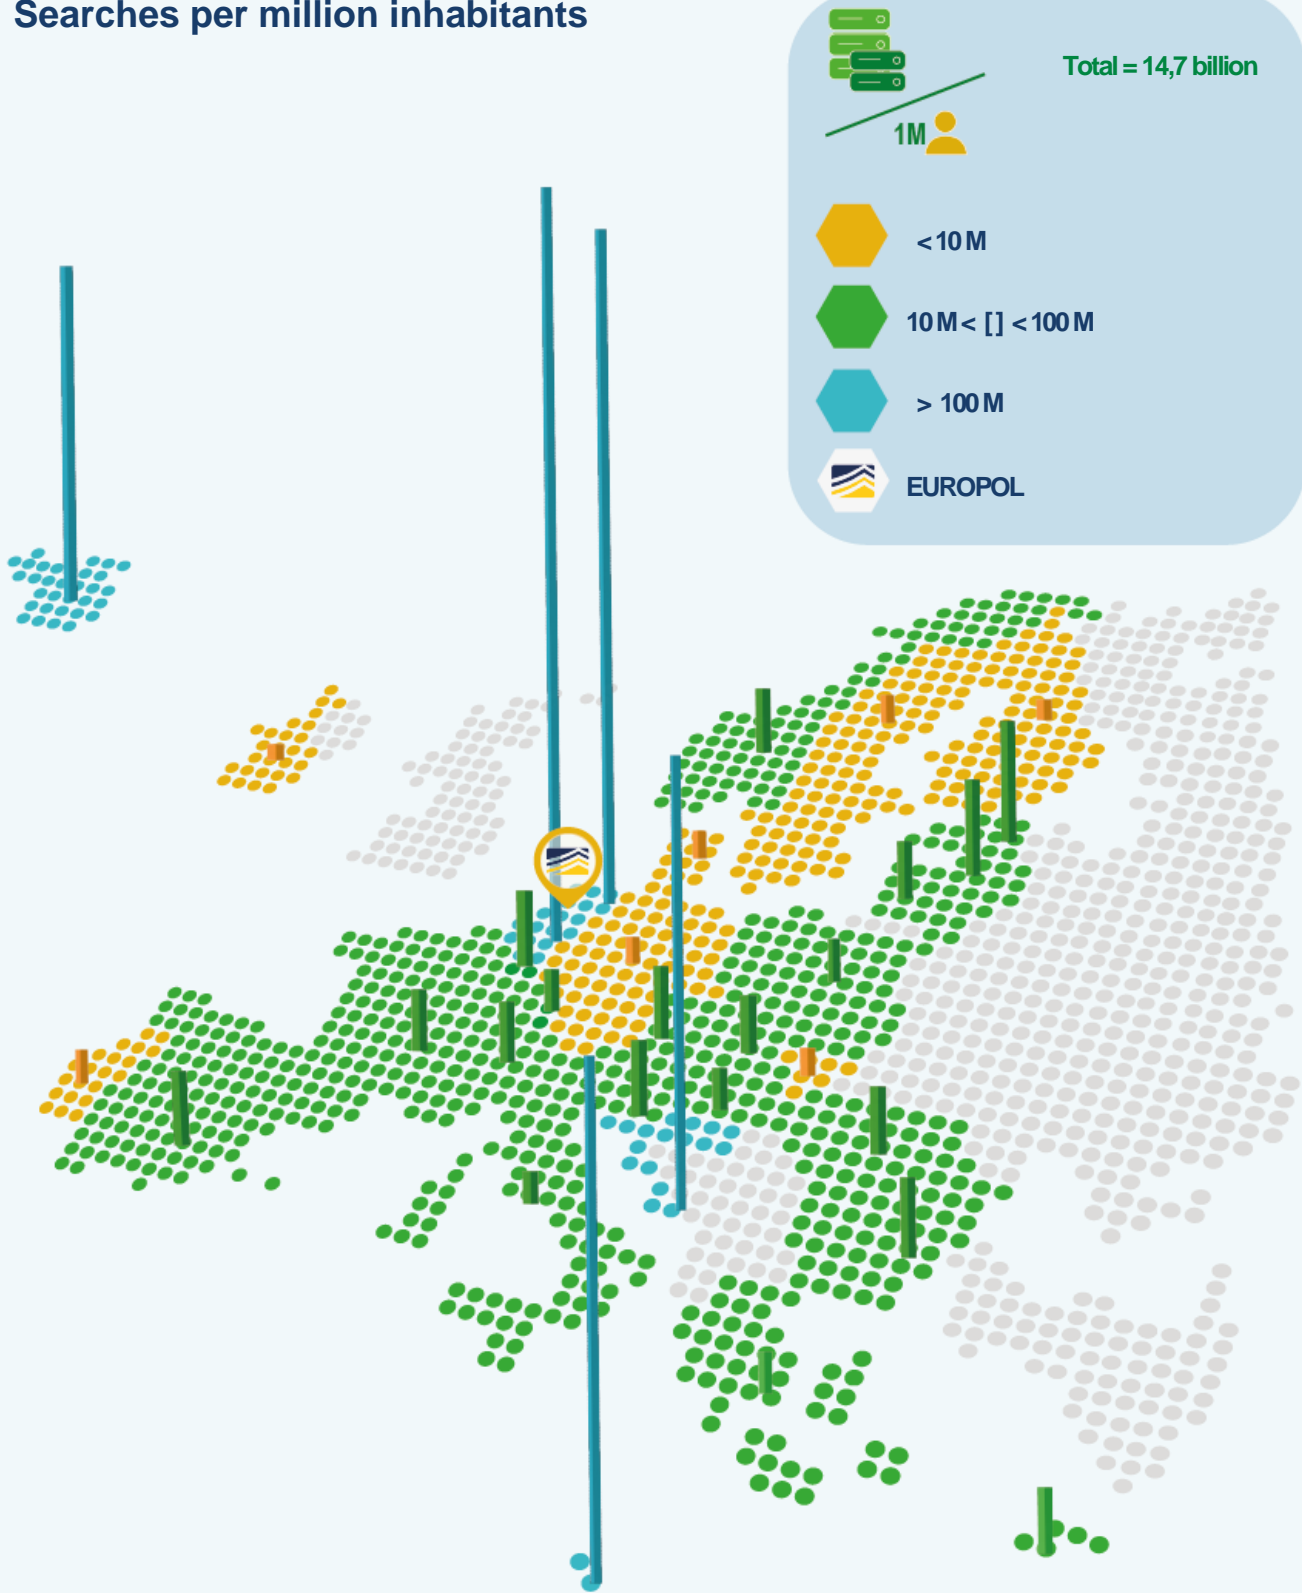

Figure 4 - SIS total searches per Member State per 1 million inhabitants in 2023

## 1.2. Operations for alert management

Accesses for alert management encompass operations performed in order to create and manage alerts. Those are: creation, update, deletion, change of expiry date, change of action to be taken (ATBT), and change of reason for request for action to be taken (RFR/ATBT). This data is retrieved from the Central SIS.

The table in Figure 5 shows the breakdown per Member States` operations for alert management. In the *Update* are counted operation for updating alerts including the new types of change of action to be taken (ATBT), and change of reason for request for action to be taken (RFR/ATBT).

In 2023, there were **20,985,933 operations for alert management**.

ES	917,592	133,859	142,513	36,675	1,230,639
SE	210,616	15,642	51,004	23,860	301,122
CH	150,360	12,343	46,663	11,912	221,278
<b>TOTAL</b>	<b>12,364,158</b>	<b>2,519,395</b>	<b>3,691,248</b>	<b>2,411,132</b>	<b>20,985,933</b>

This represents an increase compared to 2022, in line with the trend observed since 2021. On the other hand, the level of operations for alert management is still far from the record level of 28.8 million registered just prior the COVID-19 crisis in 2019. In order to compare data with previous years, changes implemented as from March 2023 need to be taken into account (see chapter 1.3).

### 1.3. Accesses compared to previous years

Comparing 2023 data with 2022 data is a complex exercise. Several changes were implemented in the system when it comes to access to the SIS as well as in the reporting with the new reinforced SIS. Novelty encompasses:

- The Automated Fingerprint Identification System (AFIS) searches performed by Member States and EU Agencies allowing the identification of a person based on fingerprints, are now reported, which was not the case in previous reporting periods;
- Alphanumeric searches reported by Member States now, comprise also the searches done by or on behalf of the services responsible for issuing registration certificates for vehicles<sup>3</sup>, services responsible for issuing registration certificates or ensuring traffic management for boats and for aircrafts<sup>4</sup>, services responsible for issuing registration certificates for firearms<sup>5</sup>;
- The new SIS legal base<sup>6</sup> allows two new operations in terms of data management (not present previously), respectively *change of action to be taken*, and *change of reason for request for action to be taken*, as these are now included in the alert management operations;
- Searches performed by the EU Agencies with access to the SIS are now reported, namely Europol based on Article 48 of Regulation (EU) 2018/1862, Eurojust based on Article 49 of Regulation (EU) 2018/1862, and Frontex based on Article 36 of Regulation (EU) 2018/1861<sup>7</sup>;
- Last but not least, Cyprus started searching the SIS as from 25 July 2023.

**Figure 6 — Searches in SIS, 2017-2023**

Figure 6 shows the trend in searches performed by Member States in SIS in the last 7 years. In the first 3 years reported, the increase was steady. In 2020, the sharp drop caused by the COVID-19 crisis stands out. In 2021 and 2022, a major increase in searches reported was observed, with respectively an increase of 82% in 2022 compared to 2021, and 88% in 2021 compared to the previous year. The rising trend continued in 2023, when searches augmented by 16% compared to the previous year.

The important increase of automated searches (ANPR systems and similar) observed in the last couple of years shall be taken into account while analysing the use of the system.

<sup>3</sup> As per Article 45 Regulation (EU) 2018/1862

<sup>4</sup> As per Article 46 Regulation (EU) 2018/1862

<sup>5</sup> As per Article 47 Regulation (EU) 2018/1862

<sup>6</sup> Regulation (EU) 2018/1860, Regulation (EU) 2018/1861, Regulation (EU) 2018/1862 published on OJ of the EU L 312 07.12.2018

<sup>7</sup> As mentioned above in the report, Europol and Eurojust are at the moment connected to SIS, and the latter did not perform any search in 2023. Frontex is not yet using the SIS. A project is on-going with the aim of connecting Frontex to the SIS.

# 2

## DATA STORED IN SIS

## 2. Data stored in SIS

By 31 December 2023, **90,512,255 alerts were stored in the SIS**. The table in Figure 7 provides the breakdown of alerts per Member State and per data categories.

Figure 7 — Data stored in SIS on 31 December 2023

With the entry into operation of the renewed SIS in March 2023, as per Article 3 Regulation (EU) 2018/1860, a **new alert category for persons** was created: *Third country nationals subject to a return decision*.

In addition, as per Article 40 Regulation (EU) 2018/1862, a **new alert category** was created for *Unknown wanted persons*.

Few **new alert categories for objects**, as per Article 38 Regulation (EU) 2018/1862, were created:

- Non-cash means of payment
- Aircraft engine
- High-value object
- Industrial equipment part
- Information technology item
- Vehicle part

By the end of the year, Member States started using all new categories of alerts for persons and for objects, except for the *High-value object* alert type<sup>8</sup>.

In the new reinforced SIS, **Alerts on persons** may be issued for:

- Third country nationals subject to a return decision, based on Article 3 Regulation (EU) 2018/1860;

<sup>8</sup> For this reason, the type of alert *High-value object* is not included in the table Figure 6. In order to be used, the alert on *High Value Objects*, a delegated act (secondary legislation) is needed.

- Third country nationals to be refused entry or stay into the Schengen Area, based on Article 24 and 25 Regulation (EU) 2018/1861;
- Persons wanted for arrest for surrender purposes on the basis of a European Arrest Warrant, or alerts on persons wanted for arrest for extradition purposes, based on Article 26 Regulation (EU) 2018/1862;
- Missing persons, including children, and vulnerable persons who need to be prevented from travelling based on Article 32 Regulation (EU) 2018/1862;
- Persons sought to assist with a judicial procedure, based on Article 34 Regulation (EU) 2018/1862;
- Persons for discreet checks, inquiry checks or specific checks, based on Article 36 Regulation (EU) 2018/1862;
- Unknown wanted persons for the purposes of identification under national law, based on Article 40 Regulation (EU) 2018/1862.

**Alerts on objects** may be issued for:

- Object for discreet checks, inquiry checks or specific checks, based on Article 36 Regulation (EU) 2018/1862;
- Objects for seizure or use as evidence in criminal proceedings, based on Article 38 Regulation (EU) 2018/1862.

By the end of 2023, alerts on objects represented 98.5% of the total alerts stored in the SIS database, whereas alerts on persons represented 1.53%. In line with the trend of the last couple of years, the biggest category was *Issue document*, accounting for almost 81% of the entire SIS database.

## 2.1. Data stored compared to previous years

The new SIS entered into operation in March 2023 has additional data categories compared to the previous version of the system. In addition, a few categories changed or expanded their purpose. This should be taken into account while comparing 2023 data stored with data from previous years.

By end of 2023, the data stored in the system increased by 5% compared to the end of 2022. Figure 8 shows the total number of alerts stored in the system in the last seven years (2017-2023).

**Figure 8 — Alerts stored in SIS, 2017-2023**

The record number of alerts was reached in the end of 2020, when the SIS database stored 93.4 million alerts. Following that, the number of alerts stored in the SIS decreased for two consecutive years due to data deletion. Data was deleted respectively due to the Brexit in 2021 (5.7million alerts owned by the UK were deleted), and the change in the legal base for SIS requiring deletion of the securities and non-cash means of payment alerts in 2022 (6.5 million alerts were deleted)<sup>9</sup>.

<sup>9</sup> For more information, please see previous years` reports at <https://eulisa.europa.eu/our-publications/reports>

In 2023, the total amount of alerts stored restarted increasing and reaching 90.5 million alerts stored.

Figure 9 – SIS alerts stored by category in 2023

## 2.2. Data per Member State

In terms of data stored per Member State, the main contributors to the system remain the same as in previous years. By the end of 2023, Italy was still the Member State providing the majority of SIS alerts, with over 20% of the total, closely followed by France (19%), Germany (14%) and Spain (8%).

The table in Figure 10 provides the total amount of alerts stored by each country by the end of 2023.

Cyprus connected to SIS in July 2023, and by the end of the year had almost 12,000 alerts, representing 0.013% of the total alerts stored.

When comparing data per Member States in 2023 with the previous year, it needs to be taken into account the fact that as from March 2023 new types of alerts are introduced, as well as some alerts have changed or increased their scope. In terms of stored data, if we compare data stored at the end of 2022 with data stored at the end of 2023, 20 Member States increased their amount of data stored in the system. The biggest increases were registered by Ireland (63%), Latvia (17%), and Portugal (16%).

Five Member States – Czechia, Denmark, Italy, Liechtenstein and Luxembourg - had a minor increase, below 1%, or a stable contribution compared to the end of 2022.

Five Member States - Bulgaria, Estonia, Hungary, Slovenia and Spain – slightly decreased their contribution.

<b>Total</b>	<b>90,512,255</b>

Similar than for the searches, it is complex to compare Member States also when it comes to the amount of data stored. This depends on many factors, including the definition of business processes at national level, workflow, national legislation and different geographical position. The map in Figure 11 is an attempt to show SIS alerts per Member State per 1 million inhabitants.

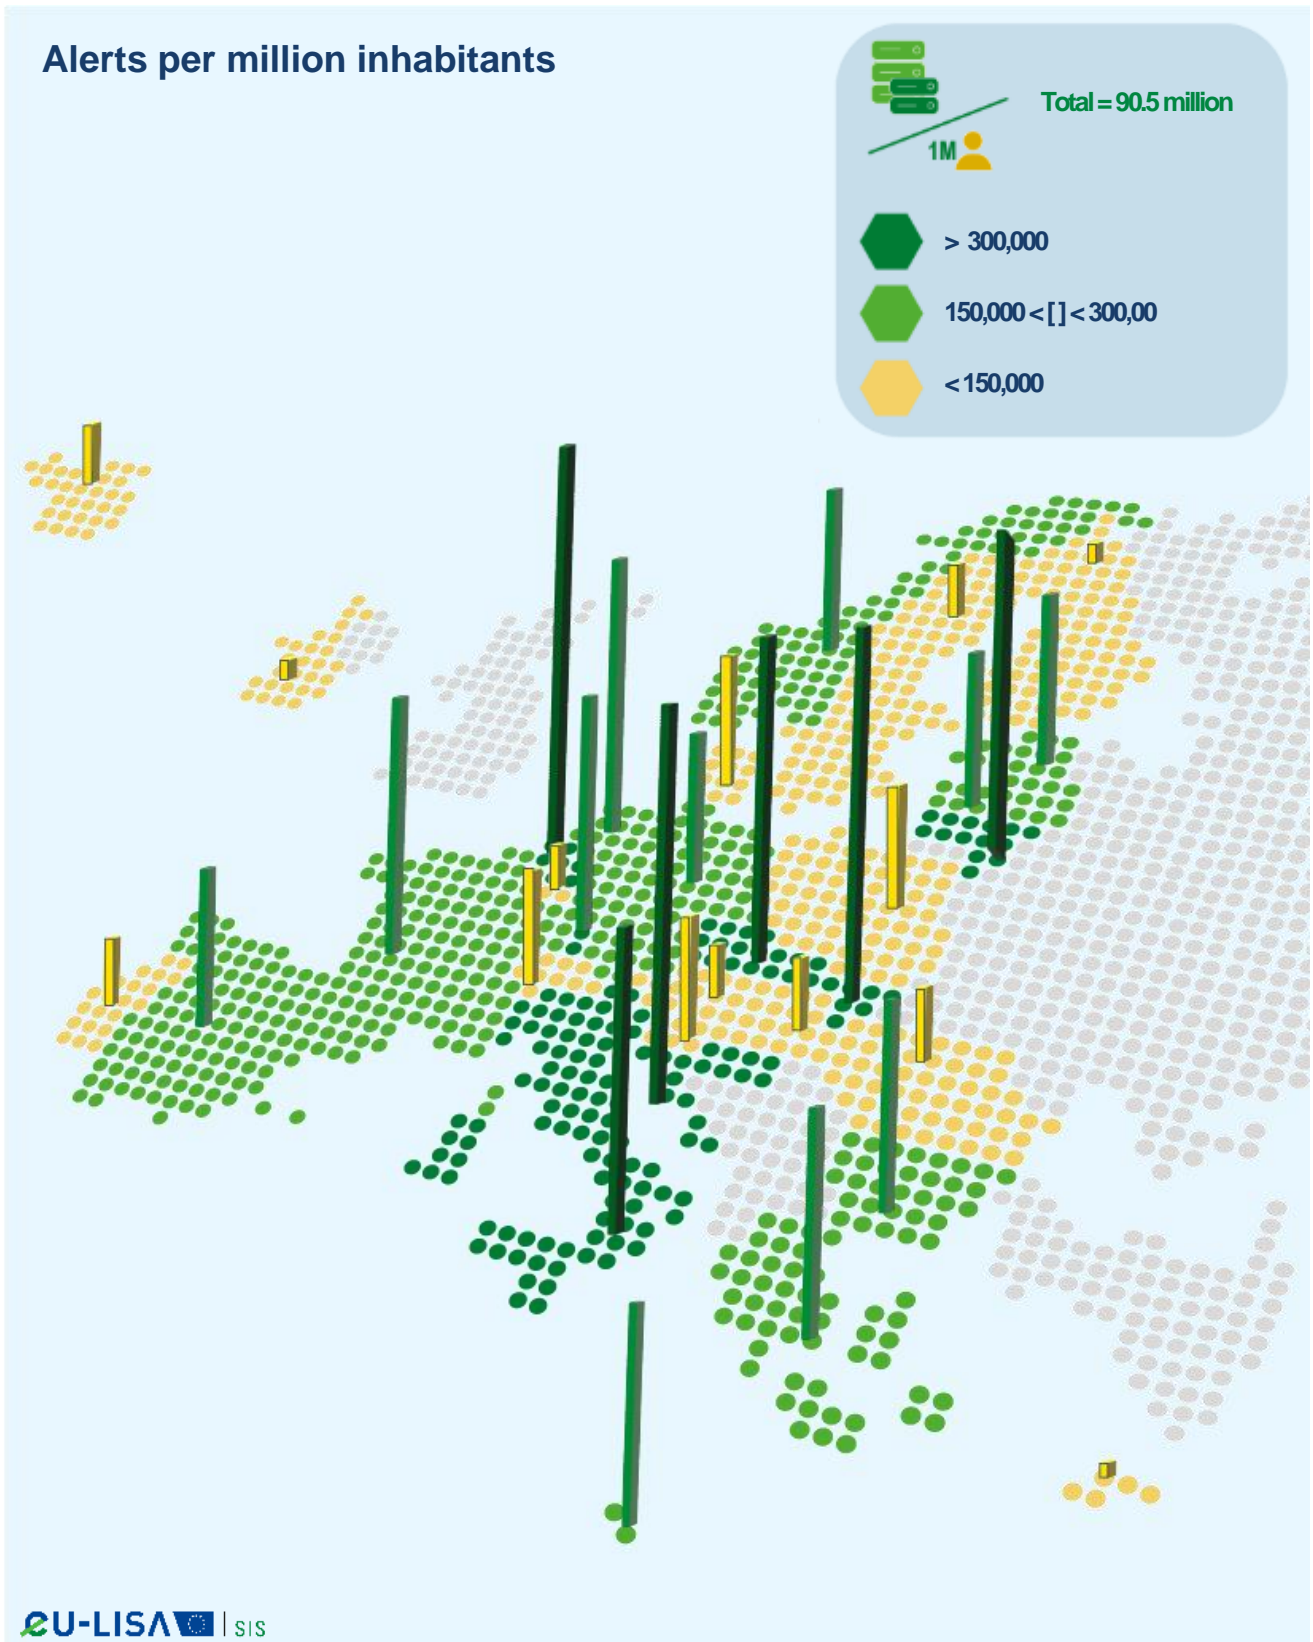

Figure 11 – Alerts per Member State and population in 2023

## 2.3. Alerts on person

The category of alert on person observed a net increase of 38% compared to end of 2022, increasing to almost 1.4 million from the 1 million at the end of 2023. In that respect, it needs to be taken into account that two types of alerts expanded their purpose as per March 2023 – alert on *missing persons, including children, and vulnerable persons* and alert on *persons for discreet, specific or inquiry checks*.

In addition, a new type of alert on person was created, alert on *third country national subject to a return decision*. The latter accounted for 23% of the total alert on person stored by end of 2023.

The alerts on *third country national to be refused entry and stay into Schengen* saw a net increase of 6% compared to the previous year, whereas the alerts on *person for discreet, specific or inquiry checks* increased by 16%. The other three types of alerts on person observed a rather stable trend, with slight increase or decrease (in the range of 1%).

Figure 12 – Percentage of different types of alerts on persons in 2023

# 3 HITS REPORTED IN SIS

### 3. Hits reported in 2023

In 2023, a total of **357,013 hits<sup>10</sup> on foreign alerts** were reported via the SIRENE Bureaux. SIRENE Bureaux are central authorities established in each Member State and at Europol serving as single points of contact for the exchange of supplementary information concerning the alerts in Schengen Information System. The SIRENE Bureaux play a crucial role in facilitating and coordinating operational cooperation between end-users of the Schengen Information System.

A breakdown per type of alert generating the hits is displayed in Figure 13.

**Figure 13 — Hits reported on foreign alerts**

SIS II - Hits on foreign alerts - 01/01 - 06/03		SIS - Hits on foreign alerts - 07/03 - 31/12	
Hits on alerts Article 26 SIS II Dec - Persons subject to arrest for surrender or extradition	2,725	Hits on alerts person for arrest and surrender or extradition, Article 26 of Regulation (EU) 2018/1862	11,582
Hits on alerts Article 32 SIS II Dec - Missing persons (adults and minors)	1,846	Hits on alerts missing person, vulnerable person at risk (adult & child), Article 32 (1) of Regulation (EU) 2018/1862	12,579
Hits on alerts Article 34 SIS II Dec- Persons to assist with a judicial procedure	9,228	Hits on alerts person to assist with a judicial procedure, Article 34 of Regulation (EU) 2018/1862	48,261
Hits on alerts Article 36 SIS II Dec - Persons and objects for discreet or specific checks	12,935	Hits on alerts person and objects for discreet, inquiry and specific check and for national security, Article 36 (3) and (4) of Regulation (EU) 2018/1862	72,206
Hits on alerts Article 38 SIS II Dec - objects for the purpose of seizure or use as evidence in criminal proceedings	7,769	Hits on alerts object for seizure and use as evidence in criminal proceedings, Article 38 of Regulation (EU) 2018/1862	45,462
Hits on alerts Article 24 SIS II Reg - Third-country nationals to be refused entry into or stay within the Schengen area	14,060	Hits on alerts third-country national to be refused entry and stay into the territory of the Member States, Articles 24 and 25 of Regulation (EU) 2018/1861	69,017
<b>TOTAL</b>	<b>48,563</b>	Hits on alerts third-country national subject to a return decision, Article 3 of Regulation (EU) 2018/1860	49,343
		Hits on alerts unknown wanted person for identification, Article 40 of Regulation (EU) 2018/1862	0
		<b>TOTAL</b>	<b>308,450</b>

Comparison with the previous year is complex due in particular to the changed or expanded scope of some alerts, as well as the additional type of alerts.

The number of reported hits increased by 36% in 2023 compared to 2022.

<sup>10</sup> As per Regulation (EU) 2018/1862, Article 3(7) "a 'hit' means any match which fulfils the following criteria: (a) it has been confirmed by: (i) the end-user; or (ii) the competent authority in accordance with national procedures, where the match concerned was based on the comparison of biometric data; and (b) further actions are requested."

# 4 RETURN POLICY

## 4. Contribution to the Return policy

The new reinforced SIS, entered into operation in March 2023, contributing to a more effective Return policy. As such, the legislator expanded the reporting obligations on SIS including also this policy field.

Data in this section refers to the period from 7 March to 31 December 2023.

As reported above

- by 31 December 2023, there were 321,549 alerts stored in SIS for *Third country national subject to a return decision* based on Article 3 Regulation (EU) 2018/1860;
- those alerts generated a total of 49,343 hits on foreign alerts.

### 4.1. Confirmed returns

In a bit more than 9 months in 2023, there were 10,005 number of confirmed returns by all the Member States related to reported hits abroad on own alerts on return at the external border at exit, as per Article 6(3) of Regulation (EU) 2018/1860. Out of those confirmed returns, 1,706 were confirmed returns where the third-country national was subject to removal, as displayed in Figure 14.

**Figure 14 — Confirmed returns**

Number of confirmed returns	
Number of reported hits abroad on own alerts on return at the external borders at exit	10,005
Number of reported hits abroad on own alerts on return at the external borders at exit where the third-country national concerned was subject to removal	1,706

### 4.2. Exchange of information

5,114 exchanges of information were reported by the Member States in relation to hits abroad on own alerts on return at the external borders upon entry, as per Article 8 of Regulation (EU) 2018/1860 (Figure 15).

**Figure 15 — Exchange of information**

Number of exchanges of information related to hits abroad on own alerts on return at the external borders upon entry, Article 8 of Regulation 2018/1860	5,114
---	-------

## Conclusion

The SIS is the largest and most widely used information-sharing system for internal security in Europe, representing the cornerstone of the Schengen *acquis*. SIS started operation in 1995, as the major compensatory measure for lifting the internal borders in Schengen. To further strengthen its operational effectiveness and efficiency, as well as to better tackle increasingly complex security challenges, the system was reinforced with the implementation of the recast, sought by the EU legislator in 2018, and ultimately implemented in March 2023.

The new reinforced SIS which entered in operation in March 2023 is even a more powerful tool than before, offering essential support for managing Schengen's external borders, ensuring an even higher level of internal security and contributing to law enforcement, judicial cooperation and migration management across Europe.

As per the data presented in this report, the growth in term of usage is clearly visible, taking into account also the expanded usage, including for return purposes, as per the increased scope in the last 9 months.

To conclude, some 2023 figures to highlight the relevance of the system in enhancing security in the Schengen area:

- Over 40 million searches were performed on average on a daily basis, across Europe. The systematic usage of ANPR systems by some Member States kept on increasing as already observed in the last couple of years;
- Over 11,500 searches were performed on average on a daily basis aiming at identifying persons of interest solely based on fingerprints;
- Almost 980 hits were managed on average on a daily basis by the SIRENE network around Europe.

Figures show that once more, SIS remains at the heart of ensuring a secure Schengen area.

In the near future, with the forthcoming implementation of the interoperability framework for internal security, borders and migration, the use of SIS will continue expanding, thereby increasing its contribution to a secure Schengen area.
