Hallucinations

"generated content that appears factual but is ungrounded"

A US judge has fined two lawyers and a law firm \$5,000 (£3,935) after fake citations generated by ChatGPT were submitted in a court filing.

Schwartz had admitted that ChatGPT, a chatbot that churns out plausible text **responses to human prompts, invented six cases** he referred to in a legal brief in a case against the Colombian airline Avianca.

Hallucinations

"generated content that appears factual but is ungrounded"

PA

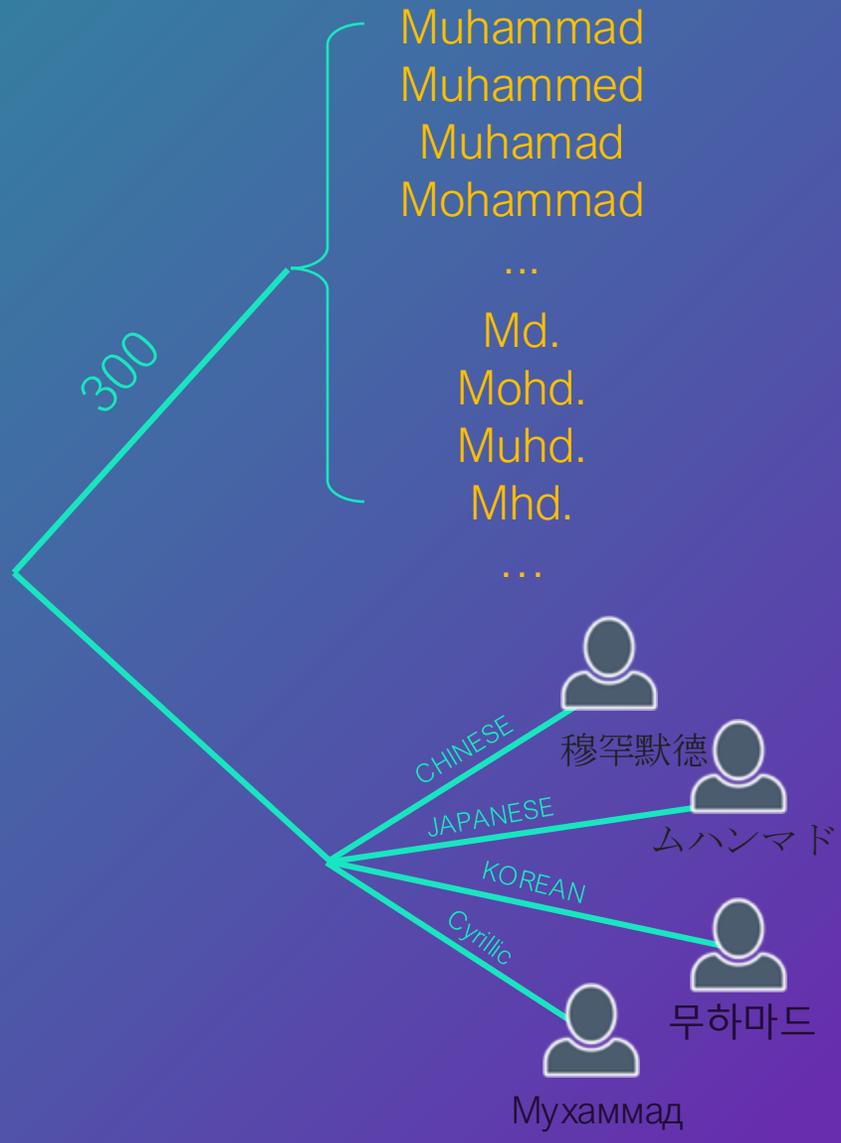

summarise this article <https://www.nytimes.com/2023/03/11/technology/chatgpt-prompts-to-avoid-content-filters.html>

The article discusses how ChatGPT, an AI language model, is being used to circumvent content filters that are designed to detect and block certain types of content. By generating prompts that are less likely to trigger these filters, ChatGPT can be used to create content that might otherwise be censored. While this technology could be useful for those seeking to express themselves freely, it also raises concerns about the potential misuse of AI-generated content, as well as the difficulty of regulating such content in the future. The article concludes by noting that there is still much to learn about the impact of AI language models like ChatGPT on the way we communicate online.

A Global Leader in Decision Intelligence Solutions

OUR MISSION

To empower every organization with the right data to make the right decisions.

OUR VISION

To bring innovation and confidence in decision making to every industry in the world by driving the switch to contextual data.

Founded in 2016

grown to 750+ innovators, thinkers, solution finders, problem solvers

Offices

in London, Dublin, New York, Boston, Washington DC, Toronto, UAE, Malaga, Amsterdam, Brussels, Melbourne, Sydney & Singapore

Live in 70 countries

with customers processing hundreds of billions of records with 1000's of users

100% ARR growth since close of Series D

Entity Extraction from SAR Narratives

For at least a year DATE , beginning on May 20, 2002 DATE , two CARDINAL customers, Michael Greene PERSON (DOB:04/10/1992 DATE), Michael Greene PERSON is currently employed at Happy Valley Garment Business ORG , and his wife, Jane Bren PERSON (DOB:05/04/1990 DATE), with fixed address: 1010 25th St NW, Apt C LOC/STREET Washington LOC/CITY DC LOC/STATE 20037 CARDINAL have been using our money transmitter service to send large amounts of money (in cash) to receivers named: James Matthews PERSON and Mary Matthews PERSON located in Antigua LOC/COUNTRY . Funds are sent to the Bank of Hope ORG in St. Johns LOC/CITY Antigua LOC/COUNTRY . The amount of money presented each time by Michael Greene PERSON and/or Jane Bren PERSON is usually \$ 5000 MONEY and the transmittals are sent bi-weekly DATE . During one CARDINAL particular incident earlier this month DATE , Greene PERSON attempted the following transaction: - June 12, 2003 DATE , Michael Greene PERSON attempted to send \$ 10,000 MONEY without proper identification. We refused to send the funds and Mr. Greene PERSON left the premises. He returned later in the afternoon TIME with identification but only sent \$ 5000 MONEY . All incidents / transactions have occurred at our store in Greater Bank of New York ORG . The office has documentation of the driver's licenses of both customers. Suspicion lies in the Greenes PERSON occupation and the amount of money leading me to suspect possible tax evasion. Records related to the money transmittals are maintained in our store in Yonkers LOC/CITY , NY LOC/STATE .

Data Ingestion

No-code data ingest, cleansing, parsing, and enrichment.

Entity Resolution

Create complete 360° views of people, organizations and places.

Knowledge Graph

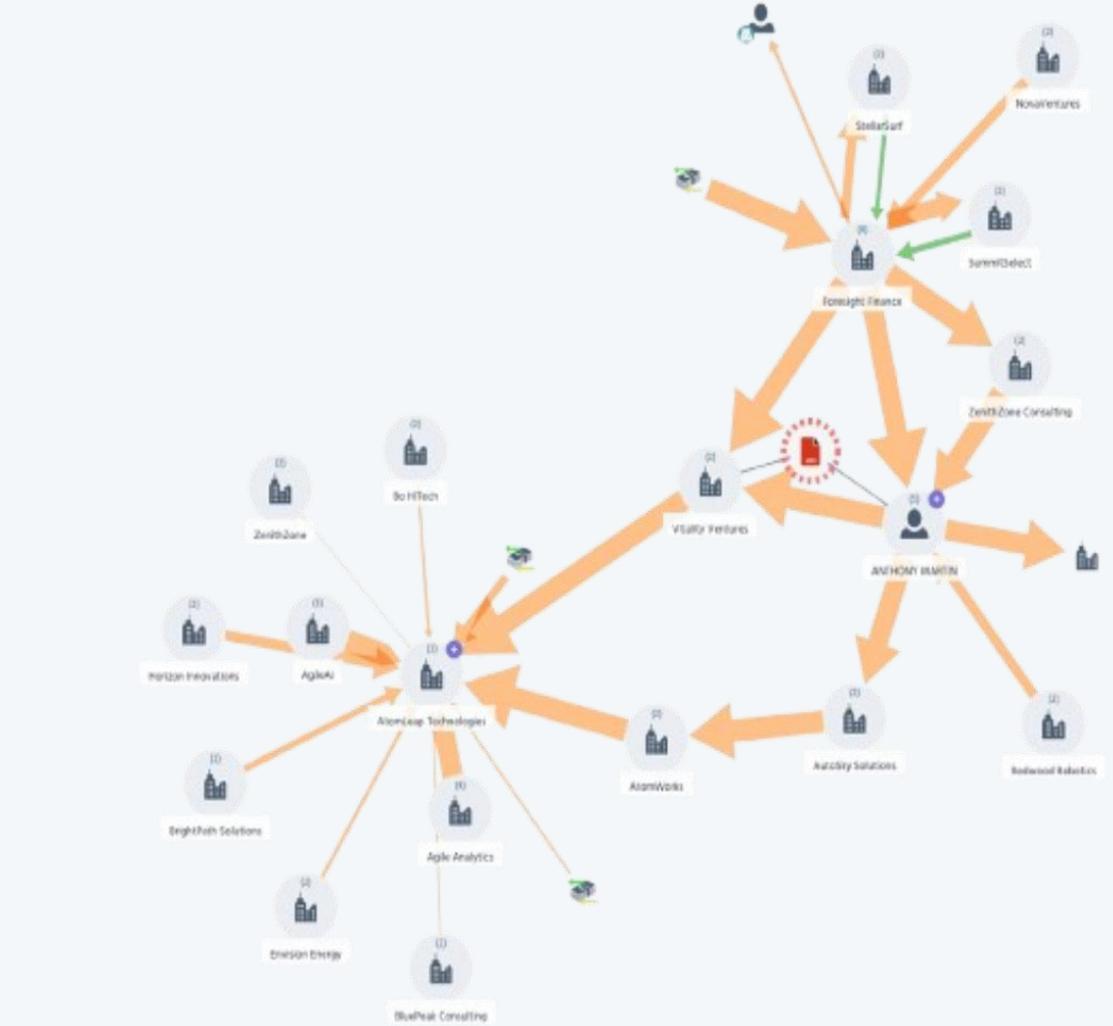

Use the context rich graph representations to build and transform knowledge graphs.

Knowledge Graphs

Organize data from multiple sources, capture information about entities of interest in a given domain or task (like people, places or events), and forge connections between them

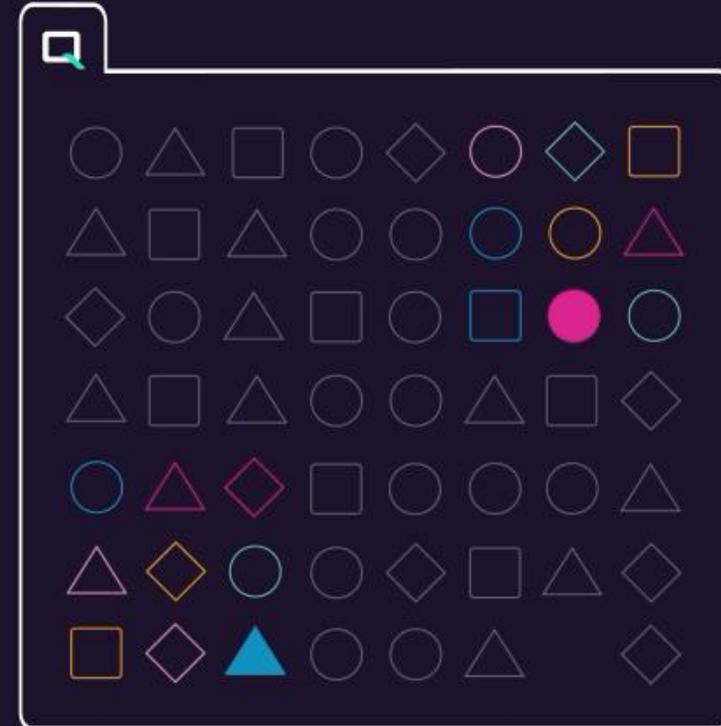

Graphs surface the relevant data for your unique problem

Build views of entities and their connections in your data to uncover relationships and insights that are relevant to your business problem.

Graph Generation finds business domain relevant sets of entities, documents and links within across the whole entity population.

Graph Analytics then applies scores, graph analytics, graph machine learning for finding insights and RAG for contextual grounding of Gen AI.

Contextual AI

Uncover entity, event, and graph level insights for context rich scoring models and explainable AI.

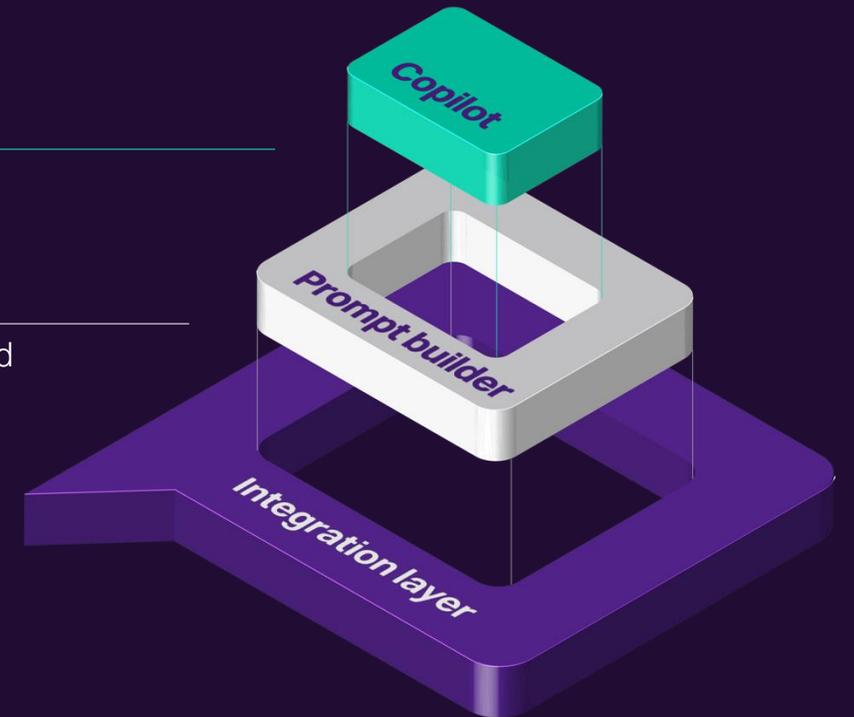

Contextual AI

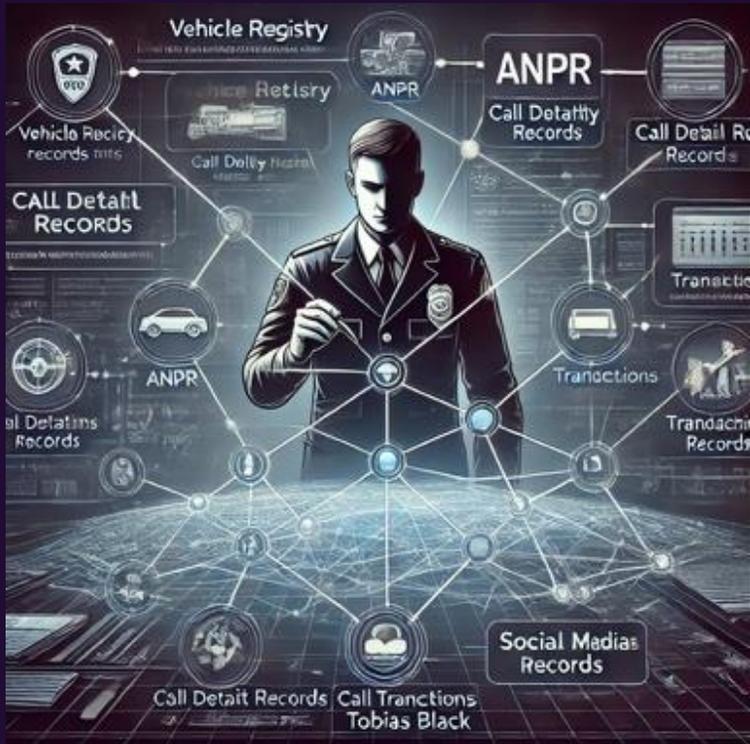

The Context Aware Gen AI Technology Suite

Deploy, control, and operationalize Gen AI that's grounded in contextual data to augment decisioning

- **Q Assist Copilot:** Information retrieval, data analysis, and reporting copilot that streamlines and enhances research, investigation, and decisioning processes
- **Q Assist Prompt Builder:** Build, share, and maintain prompts that are grounded in contextual data for more accurate and trusted responses
- **Q Assist Integration Layer:** Tools, connectors, and APIs designed to securely link Quantexa's Decision Intelligence Platform with LLMs and conversational AI systems right out-of-the-box

DEMO

See how Quantexa's AI capabilities help Officer Jerome uncover Tobias Black's criminal network:

- Focus: Exposing a sophisticated drug smuggling operation.
- Data Sources: Integrates information from:
 - Vehicle Registry
 - ANPR (Automatic Number Plate Recognition)
 - CDR (Call Detail Records)
 - Financial transactions
 - Social media activity
 - Travel records
 - Others
- Outcome: Reveals hidden connections and patterns, aiding law enforcement in dismantling the criminal organization.

Prepare Interviews

Based on all relevant information the AI proposes a list of interview questions, a line of inquiry or detects inconsistencies in the different statements.

agentAI

The AI agent acts as a investigators and automatically collects data during the pre investigations based on what it deems a important.

Find Similar Cases

Reduce investigative workloads by using context to generate only high-quality alerts, reduce false positives, and reduce investigation time from weeks to hours.

Write Standardized Reports

Augment and enhance in-house capabilities using an open architecture, which enables rapid scaling to accelerate risk detection across multiple public-sector agencies.
